- SABS Roadworthy Trailer
- Easy to operate & maintain
- Available as PTO

150 mm Drum-Style Gravity-Feed Wood Chippers

The 150 range is built for the same applications as the smaller 100 Series, except that it boasts a wide in-feed opening which allows this unit to pull material with small side branches in with ease. The perfect unit for a garden service or company clearing small branches on a housing estate. The discharge chute can swivel 360 degrees and the chip deflector allows the operator to control the direction of the chip discharge. This model is very easy to operate and has extremely low maintenance costs. The engine-driven CDE unit is built standard on an SABS Roadworthy Trailer and is easy to move around by hand once hooked off. The CDE also comes standard with a spare wheel and toolbox. The CDP is the only PTO-driven gravity-feed chipper in our range. A PTO-shaft is included with the unit and the well positioned connection points allow for quick connection to the tractor. A heavy duty (150 HD) unit with an even wider in-feed opening is also available for material with more side branches or difficult material such as prickly pear leaves.
